RCA Signal Sensor II electronic remote control

This RCA electronic remote system gives you chairside tuning convenience. It switches smoothly and quietly through twelve VHF channels and up to eight UHF channels (inactive channels are automatically bypassed). It also turns TV on and off and provides continuous volume adjustment.

RCA ColorTrak Control Center

Convenient touch-button tuning from your easy chair.

RCA's ColorTrak Control Center provides complete chairside remote control—so complete, in fact, that no controls are visible on the set. It turns the set on and off. It changes channels—all 82 of them—instantly and silently, going directly to the channel you select. It gives you continuous adjustment of color, tint and volume. It even tells what channel you're watching and the time of day!

Time of day and channel number appear momentarily on the screen whenever color, tint or channel number buttons are touched.
